

STUDY IN AUSTRALIA

Live. Learn. Grow.

Study at an Australian university. Gain an international qualification.

Australian universities are renowned worldwide for the quality of their teaching and research. Although institutions issue qualifications from Australia, their graduates are at home anywhere in the world.

An education in Australia is a truly international experience. Our universities are linked to institutions in more than 100 countries and academic staff members are recruited from abroad. After graduating in Australia, you will be able to work in companies around the world.

An Australian university will provide you with a sound understanding of your chosen field, along with academic skills that can be applied to other areas. You won't just be learning about health, science, engineering, or the arts. You'll also be learning how to think creatively and independently.

The Australian higher education sector comprises 39 universities, plus a small number of specialist tertiary institutions. Additionally, some 100 institutions are accredited by state and territory governments to deliver specific courses, usually in association with a university.

Education quality is assured by an independent body called the Australian Universities Quality Agency (AUQA). AUQA audits the activities of Australian universities in Australia and offshore on a five-year cycle, ensuring institutions deliver what they promise.

Higher education qualifications offered in Australia.

Australian universities offer programs from Architecture to Zoology. The Bachelor Degree is the most common qualification offered in Australia. Specialised research training and professional development is also offered through Masters Degrees and Doctoral Degrees.

Graduate Certificates and Graduate Diplomas are also available. Diplomas are becoming less common, however, the Associate Degree provides a shorter-cycle Degree program for professionals wishing to further their careers.

*Australia is the
perfect place to live,
learn and grow.*

Australian research and innovation.

Australian scientists and researchers have been responsible for major breakthroughs and technological advances around the world. Our best-known achievers have won international awards, including eight Nobel Prizes.

Australian researchers conduct studies in every major discipline, in individual and collaborative projects. Research teams are at the forefront of their fields.

Australian universities play an important role within the global research community. Through their collaborations with public sector research agencies, industry and local communities across Australia, and institutions overseas, Australian universities make an important contribution to our understanding of the world.

University campuses are spread across diverse locations throughout Australia, including all major capital cities. Rural and regional campuses are often located near research communities and have strengths in areas such as agriculture, veterinary science, environmental studies and water resource management.
